

NexaTech — Company Profile

Document Type: Company Information

Company: NexaTech Solutions

Founded: 2018

Headquarters: Amsterdam, Netherlands

1. About NexaTech

NexaTech Solutions is a software company specializing in cloud infrastructure, artificial intelligence, and business automation.

The company was founded in 2018 by a group of software engineers and data scientists who wanted to make advanced technology more accessible to medium-sized businesses.

NexaTech currently serves customers in Europe, North America, and selected markets in Asia.

2. Mission

NexaTech's mission is to help businesses automate repetitive processes and make better decisions using reliable software and artificial intelligence.

The company focuses on building practical technology rather than experimental products without a clear business use case.

3. Vision

NexaTech aims to become a leading provider of AI-powered business infrastructure for growing companies.

The company's long-term vision is to provide an integrated platform combining data management, artificial intelligence, automation, and analytics.

4. Main Business Areas

NexaTech operates in four primary areas:

Cloud Infrastructure

NexaTech provides managed cloud infrastructure for businesses that need scalable computing and storage.

Artificial Intelligence

The company develops AI-powered applications for document analysis, customer support, knowledge retrieval, and business intelligence.

Business Automation

NexaTech's automation platform allows businesses to automate repetitive workflows involving emails, documents, databases, and external applications.

Data Analytics

NexaTech provides analytics tools that allow companies to monitor business performance and generate reports from operational data.

5. Company Size

As of August 2026, NexaTech employs approximately 180 people.

The company has engineering teams in Amsterdam, Berlin, and Lisbon.

Customer support operates across multiple time zones to provide assistance to international customers.

6. Customer Segments

NexaTech primarily serves small and medium-sized businesses and mid-market companies.

Typical customers include:

- E-commerce companies
- Financial technology companies
- Logistics businesses
- Software companies
- Professional service firms
- Online retailers

NexaTech does not currently focus on consumer products.

7. Technology

NexaTech uses a combination of cloud computing, machine learning, large language models, databases, APIs, and automation technologies.

The company's AI platform supports retrieval-augmented generation, document processing, semantic search, and workflow automation.

8. Customer Support

Standard customer support is available Monday through Friday.

Business and Enterprise customers receive priority support and access to dedicated customer success representatives.

Support requests can be submitted through the customer portal or by email.

9. Company Values

NexaTech's main values are:

Customer Impact: Technology should solve measurable customer problems.

Technical Excellence: Engineering decisions should prioritize reliability, maintainability, and security.

Transparency: Teams should communicate openly about decisions, limitations, and failures.

Continuous Learning: Employees are encouraged to experiment, learn new technologies, and share knowledge.

Responsible AI: AI systems should be developed with attention to reliability, privacy, security, and potential misuse.

10. Partnerships

NexaTech works with cloud providers, technology vendors, and consulting partners.

The company also maintains partnerships with several universities and research organizations for AI research and talent development.

11. Future Direction

NexaTech plans to expand its AI automation platform during 2026 and 2027.

Major areas of investment include autonomous workflow agents, enterprise knowledge systems, real-time analytics, and AI-assisted software development.

The company expects AI-powered automation to become an increasingly important part of its product portfolio.
